

Smart Loyalty Card

Elena Morelli

Introduction

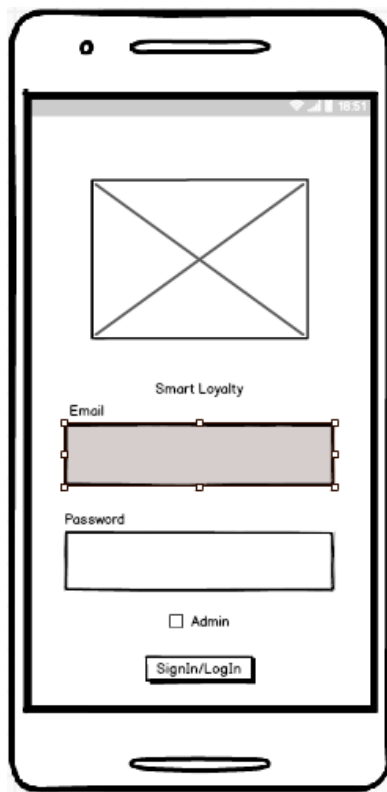

The purpose of the application is to replace the points card that you get in cafe or similar places. The app could be used by the employer or by the customer. The employer would be able to know who is talking to and to update the number of points in the card without the user having to show it. The user won't have to keep the card with him because it will be in his smartphone all the time.

1. Application Scheme

The technologies that are going to be used are :JSON, PHP, ORM, MYSQL, IBEACON.

1.1 Mockups
